

IN THE CLAIMS

Please amend the claims as follows:

1. A barrier laminate (1) comprising barrier and planarisation materials, characterized in that said barrier laminate (1) contains at least one discontinuous layer (4) of a planarisation material, which layer is divided into unconnected areas (5) distributed along the plane.
2. A barrier laminate (1) according to claim 1, wherein said unconnected areas (5) are separated by regions (6) of a barrier material.
3. A barrier laminate (1) according to claim ~~1-or-2~~, wherein said planarisation material is an organic material.
4. A barrier laminate (1) according to claim ~~1-or-2~~, wherein said planarisation material is a combination of organic and inorganic materials.

5. A barrier laminate (1) according to ~~any one of the preceding~~
~~claims~~claim 1, wherein said barrier material is an inorganic
material.

6. A barrier laminate (1) according to ~~any one of the claims 2-~~
~~5~~claim 2, wherein said regions (6) of a barrier material forms a
checked pattern.

7. A barrier laminate (1) according to ~~any one of the preceding~~
~~claims~~claim 1, further comprising at least one continuous layer (3)
of a barrier material.

8. A barrier laminate (1) according to ~~any one of the preceding~~
~~claims~~claim 1, wherein said discontinuous layer (4) is arranged
between two continuous layers (3) of a barrier material.

9. A barrier laminate (1) according to ~~any one of the preceding~~
~~claims~~claim 1, further comprising at least one continuous layer (2)
of a planarisation material.

10. A barrier laminate (1) according to ~~any one of the previous~~
~~claims~~claim 1, wherein said planarisation material is a polymeric
material.

11. A barrier laminate (1) according to ~~any one of the preceding~~
~~claims~~claim 1, wherein said planarisation material is selected from
the group consisting of parylene, acrylates, epoxides, urethanes,
spin-on dielectrics, and siloxanes.

12. A barrier laminate (1) according to ~~any one of the preceding~~
~~claims~~claim 1, wherein said barrier material is selected from the
group consisting of are SiO_2 , SiC , Si_3N_4 , TiO_2 , HfO_2 , Y_2O_3 , Ta_2O_5 , and
 Al_2O_3 .

13. Use of a barrier laminate (1) according to ~~any one of the~~
~~preceding claims~~claim 1 as an oxygen and/or water impermeable film.

14. A method for the manufacture of a discontinuous layer (4) in
a barrier laminate (1) comprising:

- depositing a continuous layer of a planarisation material,
 - removing regions of said layer of a planarisation material,
- and
- filling said regions with a barrier material.

15. A method for the manufacture of a discontinuous layer (4) in
a barrier laminate (1) comprising:

- depositing a patterned layer of a planarisation material, whereby regions where no planarisation material is deposited are formed, and
- filling said regions with a barrier material.

16. A method according to claim 15 ~~or 16~~, wherein said filling of said regions with a barrier material is performed simultaneously as the deposition of a continuous layer of a barrier material on said discontinuous layer.

17. An electronic device, or more particular electroluminescent device, having active layers and a barrier laminate (1) according to ~~any one of the claims 1 to 12~~ claim 1 positioned over the active layers, the laminate having a discontinuous layer (4) which is, among the layers of the laminate containing planarisation material, the one closest to the active layers of said electroluminescent device.
